Ankle
Clinic.**

Press Release

A new test is available in south Texas for early detection of Neuropathy.

Sudoscan provides painless accurate, reproducible test for diagnosis and monitoring of neuropathy and its treatments.

Pleasanton, Texas, October 14, 2013:

The Silvester Foot and Ankle Clinic, in an effort to provide continued excellence in the diagnosis and treatment of peripheral neuropathy, has recently acquired a Sudoscan device from Impeto medical. This device measures small fiber nerve function by measuring chloride ions released by sweat glands. The new test is painless, takes about three minutes and provides an accurate evaluation of the severity of nerve damage associated with neuropathy other nerve conditions. It can detect early neuropathy so appropriate steps can be taken to treat the disorder. It can provide an objective evaluation of the effectiveness of therapy. This means patients can now be evaluated quickly, without pain and without going to another facility. "We have always emphasized finding new ways to diagnose and treat this difficult condition in our office. Now we can provide real time evaluation of the effectiveness of our therapies. We are very excited about it."

The Silvester Foot and Ankle Clinic is located at 409 North Bryant Street in Pleasanton, Texas. Phone number is 830-569-3338.
