What Everyone Should Know About Fungal Infections

Fungal infections are caused by dermatophytes, or fungi that live on the dead tissue of hair and outer skin layers. Fungal infections can cause ongoing discomfort and complications if not addressed quickly and effectively.

Formula 3® ... The Effective Treatment Preferred by Physicians

For over 50 years, the FDA has approved the use of tolnaftate for the treatment of fungal infections. * Formula 3® is effective as a result of Tetra's invention of oil-soluble tolnaftate, and was the first product available to patients utilizing this formulation. Formula 3® contains natural jojoba oil which is quickly absorbed by the skin, and delivers tolnaftate directly to the infected area.

Ask Your Doctor About Formula 3®

Because it's critical that any infection be properly and correctly diagnosed by a physician, we only make Formula 3® available at your doctor's office.

For best results, apply fast-acting, quick-absorbing Formula 3® after showering, when the skin has the greatest capacity for absorption. Use twice daily. Typically, your bottle of Formula 3® will last between three and six months, making it an exceptional value.

Consult your physician before using it if you are pregnant. Formula 3® does not contain essential oils. If you have hypersensitive skin, you may experience redness and/or itching. If this occurs, stop treatment and contact your physician.

* For effective treatment of most *tinea pedis* and *tinea corporis*.

Ask your Doctor if Formula 3® is right for you!

EASY STEPS TO TREATMENT

1

CLEAN IT UP!

- Clean the affected area and DRY thoroughly.
- Pay special attention to spaces between the toes. Don't be in a rush to put on your shoes, let your feet air out.

2

APPLY IT THIN!

- A thin layer of Formula 3® applied over the affected area **twice** daily (morning and night) or as directed by a doctor will allow the product to penetrate the tissue and reach the fungal growth area.
- Apply Formula 3® regularly. Do not skip applications.

3

CHANGE IT OFTEN!

- Change your shoes and socks when your feet get wet or damp. Keep extra socks with you and change them when needed.
- Wear well fitting, ventilated shoes. Buy absorbent or special synthetic socks that wick the perspiration from your feet.

Ask your Doctor if Formula 3® is right for you!
